

Multiple Sensors

<https://0x8.ch/HackersCardgame7>

Inventor: xxxxx

Year: ~1999

with-a-synthetic-sensor This sensor can detect light, infrared, Electromagnetism (x,y,z), Temperature, Sound.... and it has a synthetic sensor (calculated dY/dt) those things will then be matched to a matrix of learned events. So it can detect for example that you enabled the microwave oven (Electromagnetism & Sound of the fan that cools down the Magnetron). Unfortunately Satan can also detect if a innocent girl uses her private epilator. If it is enabled and disabled over a period more than 10 minutes. **Most likely they then add pedophile old people to her / his stream and sell the her or both non-consensually as bitches.** This would lead to avoidance behavior for body care and in Switzerland they then could you put in a **Mental Institution for neglect Swiss: ZGB Art. 426.** **They changed that now and try to hack media** spialis implant on this event, pedophile people like urs, astrid and Pfisterer obfuscate hacking attack to kill innocent boys and girls.

Access Based Enumeration

<https://0x8.ch/HackersCardgame7>

Inventor: CIA?

Year: ~1977

Depending on the authorization (or the security clearance) of a user, folders are shown or not shown in a Windows Network. The same principle maybe applies to websites, youtube, facebook, twitter and maybe even github... if you look at the m50 card the same system "could" be used to **split society into two+ separate groups**, and there would be even some triggers known to some of the older groups to start a civil war between this two groups. Maybe explaining **Access Based Enumeration++** to the society would deescalate this problem a bit. So update your people with this knowledge. I learned about Access Based Enumeration at ABB Technikerschule Baden, hopefully only the students not yet joined the dark side, some of their parents... unfortunately did. **SELECT * FROM ABBT5 < 1970.**

DESIGN PATTERNS

Abstract Factory	S	Facade	S	Proxy	S
Adapter	S	Factory Method	C	Observer	B
Bridge	S	Flyweight	S	Singleton	C
Builder	C	Interpreter	B	State	B
Chain of Responsibility	B	Iterator	B	Strategy	B
Command	B	Mediator	B	Template Method	B
Composite	S	Memento	B	Visitor	B
Decorator	S	Prototype	C		

alp3

Inventor: Architect Christopher Alexander ~1977

Design patterns are proven solution templates for recurring design problems in software development.

A design pattern usually contains several classes (templates or objects). A single design pattern is a collection of different such templates. E.g. The shape of a single step of stairs AND the railing (steelwork or eg woodwork) for the complete stairs AND for example the shape for the carpet of each step.

Architecture, Software development, psychology (Archetypes), Sociology (Archetype-Combinations)

VINTAGE COMPUTING

IBM Mass Storage
System 3850 (80ies)

<https://0x8.ch/HackersCardgame7>

Inventor: xxxxx

Year: ~1977

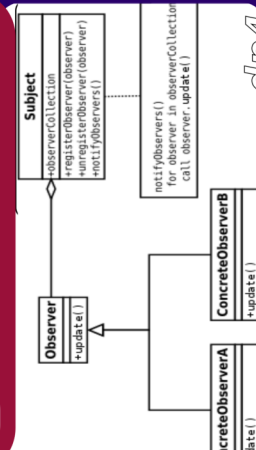

If one would find the older people that bought eg. an IBM System 3850 in the early days of modern computing, we could maybe find out who did all this bad things that happens in the world today. Psychological Profile of such a person would match to rich people and therefor maybe also not the nicest people. But remember this would only be the first guess. If i would be rich i would give all my money to save the world, since there are still many problems on this world i bet i am not completely wrong with my first guess.

Could we find out who bought this sort of mass storage or other expensive? computer equipment in the old days??? unknown: IBM had a "maybe" a few

Observer Pattern

alp4

Inventor: Erich Gamma, Richard Helm ... ~1994

The observer pattern (also called listener pattern) is a design pattern in software development. It belongs to the category of behavior patterns. Some people would like that the non techie people think that "observer pattern" means that all the IT and Computer Science People are doing illegal Surveillance and even work for the NSA / CIA. But in fact the term **Observer Pattern** has nothing to do with **surveillance**. But of course this **design pattern** could also be abused in **illegal surveillance**. (The strange thing is that this colored part was deleted in my repo) So another way to isolate gifted computer science people from the people gifted in other things.

64 ASSEMBLER

Inventor: xxxxx

Year: ~1999

Assembler Coding...
https://media.ccc.de/v/25c3-2874-en-the_ultimate_commodore_64_talk

Even better:
https://media.ccc.de/v/33c3-8029-the_ultimate_game_boy_talk

Calling it "Ultimate Talk" is ultimately correct, WOW really fu*** work

To learn Assembler and Computer Architecture the easy and funny way... with smooth SID-like sound :)

CLASS

alp2

Inventor: Alan Kay

The inventor of the programming language Smalltalk was the first who used objects in software development; But Gutenberg and the letters of his printing presses was another example of templates. A class can be a single template for part of a complete software, e.g. "Name, address, location, phone, ..." would be a template for a person in an address database.

Simplification/standardization through "pre- printed (software) templates", so in **cyberwar** (especially when they use things like t1 card) after a while you would recognize the general behavior of the class or the design-pattern (dp4) that makes it much easier to defend yourself against such attacks.
