There seems to be some spell or socio psychology design pattern to prevent people from distributing information(s). It samples the same as my own touring complete avatar tries to tell other people, then their touring complete avatars

know this \$information already proof 1 that i know already proof 2 that i know already

i know this \$information already proof 3 that i know already

makes the mansplaining person think, ok i dont need to esplain that to him / her. Workanound: use more words and reason could be a mother that would like to keep the kid isolated with such a lack of bady care, or wrong bahavior... from this person. That earlier shows real scenes from

durch Blums

Bitching

Tomorrow they possibly will force me to take "anti" payshotics. It's not medicine, it destroys your brain, your intellect, your soul. The older Generation kills you this way. So you will be "reborn" as stupid robot. They will again abuse you as scapegost, and again you would have to pay the bill for what the parental generation did. So I wish, that all my tangible and intangible goods will be inaccessable (markis; transitive) for people that are older than the 1977s Generation. And that this Cardgame will be distributed to younger people that would mayob helps them to defend themselfes against those people that hunts down inneent children in the age uf 4 just because they bought an assembly book. And to those that did this to me please repeat the bible:

Thou shall not the train that this (Bundesverfassung pregard). Year: ~???? Dear older generation, Please remember this when you end up in hell, and you will be there and guilty.

Adaptive learning-algorithm that adapts places to hide

Karma seems to be abused for malware that is autopoietic, that is transmitted eg, from Neuralink to Neuralink. Or after such a "fishing crusada" (@ioerror takled about in "To protect and infect, part 2". If you report such an attack to the people that should have an eye on that, the malware tells them that the person that reported it is th

but the above variant of <mark>karam</mark> is possibly more some sort of military way of blaming religions for attacks the do in

even if he is 1980s generation, it would be likely that these sort of attacks are generated not from a single person but from a bigger network.

Patients that takes their drugs tend to be remote controlled. The algorithm that controlled. The algorithm that places where i try to hide so that i can work without beening bugged.

In Königsfelden they always know where the patients are, otherwise they could not bug me patients are, otherwise they could not bug me patients are, otherwise they could not bug me permenently. Maybe eyel card or maybe something like implanted RFID and the uplink eg, the fire alarm system unfortunately tempering with the fire alarm system would be a really really bad idea, but maybe we could order the same system as they have here in Königsfelden to temper with... worst case it's not a default system and has unknown addons, in that case i guess in the Workshop near the railways, they maybe have some

I think karma would be great, that if you really try to help people that this would give you some benefits.

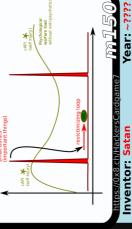

'complete secrecy"... maybe not

unused parts... it's in addons, in the

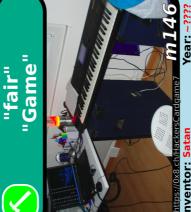

Swimm

If i don't have anti-psychotics, there is some baseband load of things that makes me psychotic, and about once a day the system makes me psychotic, and about once a day the system makes me psychotic, and about once a day the system makes me slap my fists on the head, the reason why i bought a autism helmer. With rispendal the base load is much smaller. This seems to enable immediately after i took the Risperdal Eventriager on drug). This makes me think that everything is ok. But though there are Bursts of bad scenes, and this scene is then looped for about 15 Minutes, but then gets down-voted. In my opinion the lower base-load would decrease my ability to cope with such things, since in on't have that much training anymore as without anti-psychotics. The bad scene is then deteted, that is great for not beeing psychotic, but in this world maybe a "good situational awareness" and training would be better that the patient learns to

They always tell you: "it's a fair game", but in fact it is not. I worked -20 Years in the first market (Swiss terminalogy for working in non-disabeled market). The average wage in Switzerland is 65'9108. So i should have about IMio \$. In fact i have goods in the worth 30.000. I payed about twice the value of my 1.5 Room Appartment ilved in for 15 Years. After they took the money, they activated the caretaker that lived 10 years less there that attacked me and then told the homeowner, that i would have attacked him. The Police brought men to the Mental Institution Königsfelden in handcuffs, so i had no chance to go to court, then they told me, it's all >>> your own fault <>>> you passed the deadline. The Finishing move of the CIA wall be to kill me to blackmail all that took my goods and to blackmail them the rest of their live, and of course this is also all my fault

Thank you that you showed me who i really am, and if Claudine broke her promise, i think it would be completely ok to own the complete Karton Aargau with my blood, and please remember to know my dead body into the garden of Blooms, Aarau and please call the press, or the sunshine press to make a big such study to force the people in Switzerland not to do such study of things...

After Family Bloom attracted me with a computer course (m75), after her daughter (m85, m83) took my heart, after they thrown me out (m45), after they but me in mental institution (m19), after is worked for 18 Years most of the time 16h not just 8h like normal people do, after they used me for many things as scapegat (scg*), after they used me for also as lab rat (t19, t11, t15)...

They always tell you: "it's a fair game", but in fact it is not. I worked ~20 Years in the first market (Swiss terminalogy for working in non-disabeled market). The average wage in Switzerland is 65'910\$. So i should have about IMio \$. Year: ~???? Inventor: Satan
