Piracy & Relicensing — co4

The Pirate Bay

Inventor: xxxxx   **Year: ~????**

As a kid I pirated lots of Software / Music / Movies. So they blackmailed me with that until i relicensed everything. As far as i know i relicensed "Monkey Island 1" and/or Doom1 about three times. After they could not blackmail me anymore with piracy they begun to blackmail me with things that go against my sexual integrity or they used scenes like "you've just been poisoned" or "you've just been raped under hypnosis" after all, i should not have relicensed all, because you maybe feel bad about things you "stole" or copied, but the other things drove me into hundreds of suicide attempts. Additionally if you have prove for real crime or even murderer and the accused would use this NSA/CIA dataset to blackmail you, as long as you dissociate because of your piracy-sins he will dissociate you but not kill you, unfortunately i relicensed almost everything. But one good thing in relicensing things you pirated eg with 6 Years is, that the records maybe help to remember childhood scenes.

brain implants info deffence Statemachine — co11

Inventor: xxxxx   **Year: ~????**

for all people that are not sinners there is some sort of statemachine that tries to obfuscate the people that were tortured 17 years with this technology:

"they" is parametric, local social network graph
->military INSERT: tweet to swissarmy, would activate
->insert MINESWEEPER <- falsch spur, eventtriger, schutzbehaptung?

1. they raped verdingkids (mitgefühl wenn selber opfer)
2. they implanted me a booby trap into the body (angst)
3. cAPI n1 (INSERT: lüge) <- Bibelverse als falsche spur
4. suicide death bot
5. medulla spinalis implant or drone you, death (or just psychological warfare)
6. reconnect to the girl you love

Driving Whistleblowers Whitehats away From ISPs — co9

i guess this card does not need a description, **date of screenshot 29.10.2019**

https://0x8.ch/HackersCardgame7

RAWHAMMER ATTACK OF THE MIND — co2

Inventor: xxx   **Year: ~????**

You could maybe also use some similar concept like rawhammer attack but on the mind (eg t1 card). Question an innocent victim if he / she wants to commit suicide, if you do this long enough this thought would be burnt into his / her mind and maybe then cause a real suicide attempt. Never play "red team" always play "blue team". This red team action could maybe would kill a victim, and then they would play dt1 card (but then you are guilty)

maybe in conjunction with co1 card

Observer Pattern — dp4

Inventor: Erich Gamma, Richard Helm **~1994**

The observer pattern (also called listener pattern) is a design pattern in software development. It belongs to the category of behavior patterns. Some people would like that the non techie people think that "observer pattern" means that all the IT and Computer Science People are doing illegal Surveillance and even work for the NSA / CIA. But in fact the term Observer Pattern has nothing to do with surveillance. But of course this design pattern could also be abused in illegal surveillance. (The strange thing is that this colored part was deleted in my repo) So another way to isolate gifted computer science people from the people gifted in other things.

Access Based Enumeration — dp1

Inventor: CIA?   **Year: ~????**

Depending on the authorization (or the security clearance) of a user, folders are shown or not shown in a Windows Netzwerk. The same principle maybe applies to websites, youtube, facebook, twitter and maybe even github... if you look at the m50 card the same system "could" be used to split societi into two+ separate groups, and there would be even some triggers known to some of the older groups to start a civil war between this two groups.
Maybe explaining **Access Based Enumeration++** to the society would deescalate this problem a bit.
So update your people with this knowledge. I learned about Access Based Ennumeration at ABB Technikerschule Baden, hopefully only the students not yet joined the dark side, some of thier parents... unfortunately did. SELECT * FROM ABBTS < 1970.

VINTAGE COMPUTING — ibm1

IBM Mass Storage System 3850 (80ies)
...meanwhile Willi is having a yellow honey

Inventor: xxxxx   **Year: ~????**

If one would find the older people that bought eg. an IBM System 3850 in the early days of modern computing, we could maybe find out who did all this bad things that happens in the world today. Psychological Profile of such a person would match to rich people and therefor maybe also not the nicest people. But remember this would only be the first guess. If i would be rich i would give all my money to save the world, since there are still many problems on this world i bet i am not completely wrong with my first guess.

Could we find out who bought this sort of mass storage or other expensive[2] computer equipment in the old days??? unknown: IBM had a "maybe" a few

C64 ASSEMBLER — c64

LD A, (a16)
3   16   4
bytes clocks clocks
@ 4 MHz @ 1 MHz

Inventor: xxxxx   **Year: ~????**

Assembler Coding...
https://media.ccc.de/v/25c3-2874-en-the_ultimate_commodore_64_talk
Even better:
https://media.ccc.de/v/33c3-8029-the_ultimate_game_boy_talk
Calling it "Ultimate Talk" is ultimately correct, WOW really fu****** great work
To learn Assembler and Computer Architecture the easy and funny way... with smooth SID-like sound :)
